About our company

PistonPower is an innovative technology company that integrates high-pressure solutions in hydraulic cylinders. The company was founded in 2016 based on ideas and developments by Mr. Jørgen Mads Clausen, Chairman of the Board of Danfoss A/S. The Cartridge Amplifier patented by PistonPower is a hydraulic, automatic, high-pressure sub-system, which is integrated into the piston rod of conventional hydraulic cylinders in off-highway and similar applications. The amplifier delivers high pressure on demand and allows for full flow by-pass when high pressure is not needed. The amplifier increases pressure up to 700 bar and are automatically activated when supply pressure reaches the activation pressure setting.

PistonPowers headquarters are in Holzkirchen, Germany.
